

**STATE FACTSHEET**

# Colorado

2017

ATSDR's partner, The Colorado Cooperative Program for Environmental Health Assessments' (CCPEHA) investigated the potential health hazards associated with exposure to environmental contamination at the Gold Mesa site in Colorado Springs, El Paso County, Colorado. CCPEHA has reached two conclusions on current and future residential exposures to contaminants found in surface soil within the top one-foot of clean soil fill at the Gold Hill Mesa site. Exposure to arsenic in surface soil within the clean fill is not expected to harm the health of residents of the Gold Hill Mesa Development and exposure to lead in surface soil is not expected to harm the health of young children in the Gold Hill Mesa Development.
